

This survey is to help me more quickly learn your background in statistics and mathematics to assist me in aiming the course at an appropriate level.

1. What is your name?
2. What is your level in school? (For example, *third year undergraduate* or *first year Masters student*.)
3. What is your major?
4. Which statistics courses have you previously taken and where and when did you take them? (Course numbers suffice for UW courses. For other courses, please provide an approximate course title. Let me know textbooks used (by author name and/or title) if you can remember.)
5. Have you completed a Calculus sequence?
6. Have you taken a course in Linear Algebra or Matrix Algebra?
7. Circle the terms with which you have at least passing familiarity.

[matrix multiplication] [matrix inverse] [matrix transpose] [projection matrix] [eigenvalue] [eigenvector]
