Assignment #3 contains problems about exploratory data analysis.
Here are the assigned problems:

From chapter 2, problems 2.9, 2.12, 2.23, 2.28, 2.33, 2.50, 2.79.

There are 7 problems, so this assignment is worth 35 HW points. If you feel challenged by these
problems, I encourage you to do additional problems on your own. I suggest choosing extra problems with
answers in the back of the textbook.

The best option is to turn in homework during lecture. However, if you need extra time to complete
your assignment, you have until 5pm of the day it is due to get it to your TA. (Eventually we will have
mail boxes. Until then, you need to work out with your TA where you can turn in your homework if it is
not ready by lecture.)

You need to talk to Professor Larget and not your TA for permission to turn homework in late. I do
not anticipate granting such permission often. Once the TAs have finished graded the assignments, I will
not ask them to grade any additional assignments. So, in particular, if you know you will be away on a
day when an assignment is due, it is your responsibility to turn it in before you leave.

Most students are able to earn 90% or more of the credit on homework and thus a full 10 semester
points. Missing some assignments (and thus averaging in zeros) is the primary reason why some students
fall short.
